STRENGTHS

Optimistic

It turns out that an optimistic attitude helps us be happier, more successful, and healthier. Optimism can protect against depression — even for people who are at risk for it. An optimistic outlook makes people more resistant to stress. Optimism may even help people live longer

PROJECTS

To-Do App

📅 02/2023 - 03/2023 📍 Location

To-Do App Having all the functionality for To-Do

- used to maintain our day-to-day tasks or list everything that we have todo, the most important tasks will be highlighted differently, and the least important tasks will be highlighted differently. It is helpful in planning our daily schedules. In this application I am using SpringBoot and Microservices architecture for backend development and Angular for frontend, creating component to segregate the functionality of frontend application where user will prioritize tasks and adding their deadline for the task they added in the application. Application helps to categories task as well. User can perform CRUD operations with the tasks. User Can see and Update own profile and user can change own login password using forgot password functionality.

Jukebox

📅 10/2022 📍 Location

Music Application like as Gaana

- A music player program mostly similar as Gaana Music App. In this program we have to do many more task like play, pause, stop and resume a particular song by given song id and this program is also, able to display the details of particular played song. First it will ask the user to Login/Signup. If user don't have account so they can register yourself by simply providing their First Name, Last Name, Email, Contact Number and password so that they can enjoy music on our portal after registering successfully user can sign in using own email id and Password (which is provided by the user at the time of registration). In this program we have given option to create multiple playlists for songs with N number of songs. Search all the songs with their title, album, artist and genre name. Sort all the songs and with their alphabetic order and by title, album, artist and genre name. I have designed this program with: - Java (Programming Language), MySQL (Database)
